Publisher / Distribution	eCH Association, Affolternstrasse 52, 8050 Zürich

1 Abstract

The standard eCH-0293 defines a common data model for recording and publishing information on public council operations in Switzerland. It covers the temporal organisation of parliamentary work (legislatures, sessions), the structuring of meetings and agenda items, votings and elections, individual votes, attendance lists as well as speeches and resolutions.

This standard is aimed at parliamentary services, software providers of parliamentary management systems, data users for analyses and visualisations, and open data platforms.

eCH-0293 is part of a family of standards for political data and works closely together with eCH-0294 (Political Actors), eCH-0295 (Parliamentary Affairs), eCH-0296 (Laws and Legal Texts) and eCH-0297 (Public Consultations).

3 Introduction

3.1 The “Political Affairs” standard family

Political activity in Switzerland takes place at federal, cantonal and communal level – in parliaments and communal assemblies, in executives and administrations, in consultations and hearings, as well as through the direct-democratic participation of eligible voters. To this end, the “Political Affairs” specialist group of the eCH Association is developing a family of coordinated standards that structure this data across all federal levels. The standards use common data elements (eCH-0292) and reference one another via unique identifiers.

The family comprises:

- **eCH-0292 – Common Data Elements (Meta):** Defines the cross-cutting data elements and meta-processes on which the other standards build. eCH-0293 adopts from it, among other things, the identification and date elements as well as the FRBR structure for linked documents.
- **eCH-0293 – Public Council Operations (Operations) – this standard:** Describes public council operations – legislatures and sessions, meetings and agenda items, protocols and decisions, votings and elections, attendance as well as speeches.
- **eCH-0294 – Political Actors (Actors):** Defines persons, groups and bodies in the political context, as well as their memberships and interest links. eCH-0293 references these actors via `group_reference` and `person_reference` – for instance which parliament convened and which person voted.
- **eCH-0295 – Parliamentary Affairs (Affairs):** Describes the life cycle of political affairs. Agenda items in eCH-0293 point to the corresponding affair via `affair_id`.
- **eCH-0296 – Enactments and Legal Texts (Laws):** Records the results of the parliamentary process – the adopted laws and enactments.
- **eCH-0297 – Public Consultations (Consultations):** Structures consultation procedures, which are often the starting point for parliamentary affairs.

The aim of this standard family is to create a commonly usable structure for political data and to provide organisations that publish information on political affairs with a robust data model.

3.2 Structure of a delivery

A delivery is a `Container`: an envelope with a `global_uri` of its own and one collection per class — `legislatures`, `sessions`, `meetings`, `protocols`, `votings`, `elections`, `individual_votes`, `attendances`, `individual_attendances`, `speeches` and `resolutions`. Agenda items have no collection of their own: they are delivered within their meeting or session (`agenda_items`). All collections are optional: those who only publish sittings deliver only `meetings`.

The entities sit side by side in a flat structure and are connected by references — `parent_meeting`, `parent_voting`, `parent_attendance` and so on — rather than nested inside one another. A single sitting can thus be delivered later without resending the entire legislature, and the same entity can be referenced from several places. Where nesting renders the connection better, it remains possible: the session takes its sittings as a list, the protocol its agenda items, votings and speeches.

3.2.1 Class: Container

Container for the records of public council operations: legislatures, sessions, meetings, protocols, votings, elections, attendances, speeches and resolutions.

3.2.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
legislatures	* Legislature	Collection of legislature records.
sessions	* Session	Collection of session records.
meetings	* Meeting	Collection of meeting records.
protocols	* Protocol	Collection of protocol records.
votings	* Voting	Collection of voting records.
elections	* Election	Collection of election records.
individual_votes	* IndividualVote	Collection of individual vote records.
attendances	* Attendance	Collection of attendance records.
individual_attendances	* IndividualAttendance	Collection of individual attendance records.
speeches	* Speech	Collection of speech records.
resolutions	* Resolution	Collection of resolution records.

3.3 Common elements

The three classes of the temporal organisation — Legislature, Session and Meeting — are deliberately built alike. The following fields have the same meaning on all levels.

Identification. `global_uri` is the identifier and is mandatory. `local_id` takes the id of the delivering system, `wikidata_uri` points to the Wikidata entry where one exists.

Begin and end. The temporal data is recorded twice: `date_begin_planned` and `date_end_planned` hold what was scheduled, `date_begin_actual` and `date_end_actual` what actually happened. Where the time of day matters, the `datetime_*` variants are available.

Space and body. `spatial` points to the spatial unit according to LINDAS — country, canton, district or commune, thus `https://ld.admin.ch/canton/2` rather than “BE”. It is the same field with which eCH-0294 locates its groups, so that council operations and the actors who carry them point to the same resource. Who convenes within that spatial unit is stated by `group_reference`, a lightweight reference to the body according to eCH-0294.

Linked documents. `documents` links documents as FRBR works according to eCH-0292 — for the legislature, for instance, membership and affair registers, for the session the session programme, for the meeting the bulletin and annexes (the protocol, by contrast, via `has_protocol`).

4 Temporal organisation of council operations

Council operations are structured in time by four classes:

```
Legislature (legislature)
  └─ Session (e.g. spring session)
      └─ Meeting (individual sitting)
          └─ AgendaItem (agenda item)
```

The legislature forms the long-term frame, the session structures the work within a legislature, the meeting is the concrete sitting in which affairs are deliberated, and the agenda item structures the individual sitting. The levels interlock in two ways: downwards they are embedded — the session takes up its sittings (`meetings`), sitting and session their agenda items (`agenda_items`); upwards, references point — the session to its legislature (`parent_legislature`), the sitting to its session (`parent_session`) or, where there is no session, directly to the legislature (`parent_legislature`). Within the agenda, `parent_agenda_item` represents the division into sub-items.

The first three classes are described below, the agenda item in the next chapter.

4.1 Legislature

A legislature denotes the period for which a parliament is elected and acts in its current composition.

4.1.1 Class: Legislature

Term of office of a parliament as a legislative assembly. Usually lasts four years.

4.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
spatial	0..1 String	Spatial reference to a LINDAS resource (fos-municipality number, fos-canton number, district, or country). Formats: municipality: https://ld.admin.ch/municipality/1234, district: https://ld.admin.ch/district/2301, canton: https://ld.admin.ch/canton/23, country: https://ld.admin.ch/country/CHE.
administrative_id	0..1 String	Administrative ID of the legislative body, such as a municipality, canton, or country.
name	*	Multilingual full designation.

Name	Cardinality and Range	Description
	MultilingualString	
description	0..1 String	Descriptive text of the element.
landing_page	0..1 String	URL providing further information.
group_reference	0..1 GroupReference	Reference to the acting body/organ (lightweight snapshot at time of linking).
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

    language: fr
  landing_page: https://www.gr.be.ch/de/start/grosser-rat.html
  group_reference:
    global_uri: actors:gr_be
    label: Grosser Rat Bern
    abbreviation:
    - value: GR
      language: de
  date_begin_planned: '2022-06-01'
```

```
date_end_planned: '2026-05-31'
date_begin_actual: '2022-06-01'
date_end_actual: '2026-05-31'
datetime_created: '2022-04-01T10:15:00+02:00'
datetime_modified: '2026-06-01T07:00:00+02:00'
```

4.2 Session (sitting period)

A session is a continuous sitting period in which several meetings take place.

4.2.1 Class: Session

A session: a contiguous period of sittings within a legislature. It groups its meetings (meetings) and may also carry agenda items directly (agenda_items). The session is the only one of the three temporal levels that may be omitted: federal units without formal sessions leave it out and attach their meetings directly to the legislature (parent_legislature). Session and meeting may also coincide — a one-day sitting of a cantonal parliament or a Landsgemeinde is represented as a session with a single meeting, or as a session that carries its agenda items directly without any meeting.

4.2.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
spatial	0..1 String	Spatial reference to a LINDAS resource (fos-municipality number, fos-canton number, district, or country). Formats: municipality: https://ld.admin.ch/municipality/1234, district: https://ld.admin.ch/district/2301, canton: https://ld.admin.ch/canton/23, country: https://ld.admin.ch/country/CHE.
name	* MultilingualString	Multilingual full designation.
number	0..1 String	Number of the session or meeting as designated by the body, e.g. within the legislature, the session or the year. As a string it also allows roman numerals. Numbering practices vary widely, which is why number, sequential_number, position and meeting_abbreviation are available side by side.
sequential_number	0..1 Integer	Sequential number of the session or meeting as an integer, used for ordering.
position	0..1 String	Integer position within the superordinate sequence, e.g. of a session within the legislature.

Name	Cardinality and Range	Description
meeting_abbreviation	0..1 String	Short designation of the session or meeting (e.g. “FS24” for the 2024 spring session).
url	* MultilingualString	Landing page or further web address, multilingual.
parent_legislature	0..1 String	Identifier of the legislature to which the session or meeting belongs. A meeting that belongs to a session is assigned to the legislature through the session (parent_session); a meeting without a session — for instance a committee sitting or a sitting in a federal unit without formal sessions — refers to the legislature directly.
meetings	* Meeting	Collection of meeting records.
agenda_items	* AgendaItem	Agenda items planned for this meeting or session, embedded as a list. On a meeting they form the agenda of the sitting. On a session they hold agenda items planned directly at the level of the session — where a federal unit does not break the session down into individual meetings (e.g. a Landsgemeinde or a one-day sitting of a cantonal parliament), or for items not (yet) assigned to a specific meeting, as in a session programme. The counterpart after the sitting are the items recorded in the protocol (Protocol.protocol_items).
joint_debates	* JointDebate	Joint debates attached to this record: on an agenda item, the debates in which it is deliberated together with other agenda items; on a meeting or a session, the joint debates held within it.
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration. Inheritance:

Name	Cardinality and Range	Description
		IsEventWithDuration
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

4.2.1.2 Usages

Used by	In slot	Role	Element
Container	sessions	range	Session

4.2.1.3 Examples

4.2.1.3.1 Example Session: Landsgemeinde as a sitting period

```yaml
sessions:
- global_uri: ops:session_gl_landsgemeinde_2025_05_04
  spatial: https://ld.admin.ch/canton/8
  name:
  - text: Landsgemeinde vom 04. Mai 2025

4.3 Meeting (individual sitting)

A meeting is the individual sitting of a body — the level at which agenda items are deliberated, decisions taken and speeches recorded.

4.3.1 Class: Meeting

The individual sitting of a body — the level at which agenda items are deliberated, decisions taken and speeches recorded. The meeting is the node to which the other classes of this

standard attach: its agenda items (AgendaItem) are embedded in it (agenda_items), while votings and elections (Voting, Election), speeches (Speech) and the attendance list (Attendance) reference it via `parent_meeting`. At this level, scheduled and actual times regularly diverge — a sitting scheduled for 14:00 only begins at 14:25 because of delays and ends at 17:30 instead of 18:00 — which is why both the planned and the actual begin and end are recorded.

4.3.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
spatial	0..1 String	Spatial reference to a LINDAS resource (fos-municipality number, fos-canton number, district, or country). Formats: municipality: https://ld.admin.ch/municipality/1234, district: https://ld.admin.ch/district/2301, canton: https://ld.admin.ch/canton/23, country: https://ld.admin.ch/country/CHE.
administrative_id	0..1 String	Administrative ID of the legislative body, such as a municipality, canton, or country.
name	* MultilingualString	Multilingual full designation.
url	* MultilingualString	Landing page or further web address, multilingual.
group_name	0..1 String	Name of the group or body in plain text, in addition to the reference `group_id`.
group_id	0..1 GroupReference	Reference to the group or body (lightweight snapshot at time of linking).
number	0..1 String	Number of the session or meeting as designated by the body, e.g. within the legislature, the session or the year. As a string it also allows roman numerals. Numbering practices vary widely, which is why number, sequential_number, position and meeting_abbreviation are available side by side.
landing_page	0..1 String	URL providing further information.
sequential_number	0..1 Integer	Sequential number of the session or meeting as an integer, used for ordering.
position	0..1 String	Integer position within the superordinate sequence, e.g. of a session within the legislature.
meeting_abbreviatio	0..1 String	Short designation of the session or meeting

Name	Cardinality and Range	Description
n		(e.g. “FS24” for the 2024 spring session).
actor_name	0..1 String	Name of the political body in plain text (e.g., Nationalrat), in addition to the reference `group_reference`.
group_reference	0..1 GroupReference	Reference to the acting body/organ (lightweight snapshot at time of linking).
state	0..1 StateEnum	Whether the meeting takes place as planned at all (planned, canceled, postponed). A diverging, free-text designation goes into `state_name`.
state_name	0..1 String	Diverging, free-text status designation of the meeting, where the values of `state` do not suffice.
description	0..1 String	Descriptive text of the element.
location	0..1 String	Place where the meeting is held — the physical room (“Federal Palace, National Council chamber”), a video conference or a hybrid format.
parent_meeting	0..1 String	Identifier of the meeting this record belongs to. On a meeting it names the superordinate meeting; on a voting, election, speech, attendance list or protocol it names the meeting in which the record arose. Agenda items do not carry it: they are embedded in their meeting.
parent_legislature	0..1 String	Identifier of the legislature to which the session or meeting belongs. A meeting that belongs to a session is assigned to the legislature through the session (parent_session); a meeting without a session — for instance a committee sitting or a sitting in a federal unit without formal sessions — refers to the legislature directly.
parent_session	0..1 String	Identifier of the session to which the meeting belongs.
documents	* Work	Sitting documents such as the bulletin (Tagblatt) or annexes, as FRBR Works. The protocol is not linked here but via `has_protocol`.
agenda_items	* AgendaItem	Agenda items planned for this meeting or session, embedded as a list. On a meeting they form the agenda of the sitting. On a session they hold agenda items planned directly at the level of the session — where a federal unit does not break the session down into individual meetings (e.g. a Landsgemeinde or a one-day sitting of a cantonal parliament), or for items not (yet) assigned to a specific meeting, as in a session programme. The counterpart after the sitting are the items recorded in the protocol

Name	Cardinality and Range	Description
		(Protocol.protocol_items).
has_protocol	0..1 Protocol	Reference to the protocol (minutes) of this meeting, recorded after the meeting. Only the identifier of the protocol is given; the protocol itself is delivered in the container's `protocols` list. It is an entity in its own right with its own identifier and is usually published later than the meeting, so it is referenced rather than embedded.
joint_debates	* JointDebate	Joint debates attached to this record: on an agenda item, the debates in which it is deliberated together with other agenda items; on a meeting or a session, the joint debates held within it.
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates

Name	Cardinality and Range	Description
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

4.3.1.2 Usages

Used by	In slot	Role	Element
Container	meetings	range	Meeting

4.3.2 Enum: StateEnum

State of the meeting.

URI: ops:StateEnum

4.3.2.1 Permissible Values

Value	Description
planned	The meeting is planned and will take place as scheduled.
	ops:enum/state/planned
canceled	The meeting has been cancelled.
	ops:enum/state/canceled
postponed	The meeting has been postponed.
	ops:enum/state/postponed

5 Agenda, protocol and decisions

The agenda of a sitting is structured by agenda items; what was actually dealt with and decided is recorded in the protocol.

5.1 AgendaItem

5.1.1 Class: AgendaItem

An agenda item of a meeting as planned beforehand. It structures the agenda and connects the temporal organisation (Meeting) with the substantive affairs (eCH-0295). It is embedded in its meeting (Meeting.agenda_items) or directly in its session (Session.agenda_items). Agenda items represent the planning of a meeting and are no longer changed in the data once the meeting has started: deviations during the meeting — items brought forward, postponed or added — are recorded in the protocol (ProtocolItem) and feed into the agenda of the next meeting. For the same reason, planned and actual times are kept separately.

5.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration. Inheritance:

Name	Cardinality and Range	Description
		IsEventWithDuration
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates
agenda_item_type	0..1 AgendaItemTypeEnum	Type of agenda item, distinguishing individual items from groups. Inheritance: IsAgendaItem
agenda_item_number	0..1 String	Number of the agenda item on the agenda, e.g. “2.1” or “3” (string type to also support roman numerals). Inheritance: IsAgendaItem
agenda_item_position	0..1 Integer	Integer position of the agenda item in the meeting sequence, used for sorting and display. Inheritance: IsAgendaItem
leading_actor_id	0..1 String	The leading department for the agenda item. Inheritance: IsAgendaItem
speaking_actor_id	0..1 String	The speaker or head of the department for the agenda item. Inheritance: IsAgendaItem
agenda_item_title	* MultilingualString	Title of the agenda item. Inheritance: IsAgendaItem
affair_id	0..1 String	Identifier of the affair (eCH-0295) the record refers to. Administrative agenda items (e.g. approval of the minutes) have no affair. An affair usually runs through several agenda items — in legislation, for instance, the debate on entering into the matter, the detailed deliberation, the final vote and, where applicable, the procedure for resolving differences between the chambers. Inheritance: IsAgendaItem
agenda_item_description	* MultilingualString	Subtitle or detailed description of the agenda item. Inheritance: IsAgendaItem
state_id	0..1 String	State identifier of the agenda item (reference to a state enumeration or a custom state), e.g. pending (not yet dealt with), in_progress, completed, postponed (to a later meeting) or withdrawn. Inheritance: IsAgendaItem

Name	Cardinality and Range	Description
state_name	0..1 String	Diverging, free-text status designation, where the status enumeration does not suffice. Inheritance: IsAgendaItem
landing_page	0..1 String	URL providing further information. Inheritance: IsAgendaItem
url	* MultilingualString	Landing page or further web address, multilingual. Inheritance: IsAgendaItem
agenda_item_category	0..1 String	Free categorisation of the agenda item by content or grouping, e.g. “Gesetzgebung”, “Budget und Finanzen”, “Interpellationen und Anfragen”, “Wahlen”, by department, or introductory and technical items. The categorisation is not standardised and may vary between federal units. Inheritance: IsAgendaItem
parent_agenda_item	0..1 String	Identifier of the agenda item this record belongs to. On an agenda item it builds a hierarchy of agenda items — e.g. an item group “Gesetzesberatungen” with the sub-items “Energiegesetz (Detailberatung)” and “Energiegesetz (Schlussabstimmung)”; on a speech it names the agenda item under which the speech was given. Inheritance: IsAgendaItem
has_resolution	0..1 Resolution	The formal decision taken on this agenda item, e.g. the adoption of the energy law. The underlying voting with its vote ratio is recorded separately as a Voting. Inheritance: IsAgendaItem
joint_debates	* JointDebate	Joint debates attached to this record: on an agenda item, the debates in which it is deliberated together with other agenda items; on a meeting or a session, the joint debates held within it. Inheritance: IsAgendaItem
text_segments	* TextSegment	Collection of text segments (e.g. verbatim protocol). Inheritance: IsAgendaItem
documents	* Work	Documents on the agenda item as FRBR Works, e.g. dispatches and reports, motions and amendments. Inheritance: IsAgendaItem

5.1.1.2 Usages

Used by	In slot	Role	Element
Session	agenda_items	range	AgendaItem
Meeting	agenda_items	range	AgendaItem

5.1.1.3 Examples

5.1.1.3.1 Example AgendaItem: Substantive affair without an agenda category

```
agenda_items:
- global_uri: ops:49_253
  agenda_item_type: item
  datetime_begin_planned: '2025-03-31T00:00:00Z'

5.1.2 Enum: AgendaItemTypeEnum

Type of agenda item, distinguishing individual items from grouped items.

URI: ops:AgendaItemTypeEnum

5.1.2.1 Permissible Values

Value	Description
item	Individual agenda item (Traktandum) with deliberation and, where applicable, a vote.
	ops:enum/agenda_item_type/item
group	Group of agenda items (Traktandengruppe) under which sub-items are arranged via parent_agenda_item, e.g. “Gesetzesberatungen”.
	ops:enum/agenda_item_type/group

5.2 Protocol

The protocol is **referenced, not embedded**. The rule this standard applies throughout therefore holds here as well — what has no identity of its own is embedded (`PersonReference` or `GroupReference`, say), what has one is referenced.

```
Container
  ├─ meetings       → Meeting
  │                     ├─ agenda_items → AgendaItem  (before: planned
agenda items)
  │                     └─ has_protocol → identifier of the protocol
  └─ protocols      → Protocol    (after: the record, parent_meeting)
                        ├─ protocol_items  → ProtocolItem (same
elements as AgendaItem)
                        ├─ votings
                        ├─ elections
                        ├─ speeches
                        ├─ text_segments
                        └─ documents
```

5.2.1 Class: Protocol

The minutes of a meeting, recorded after the meeting and kept exactly once per meeting. A wrapper container bundling the agenda items actually dealt with (protocol_items), votings, elections, speeches, verbatim text segments and linked documents. The protocol has its own identifier, can be cited on its own and is usually published later than the meeting; the meeting therefore only references it (Meeting.has_protocol), and the protocol itself is delivered in Container.protocols, so that it can be delivered later without delivering the meeting again. Within the protocol the collections are embedded, because they arise and are delivered together with it. Whoever publishes votings or speeches independently of the protocol delivers them flat in Container.votings or Container.speeches and links them via parent_meeting and the respective agenda item reference.

5.2.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
parent_meeting	0..1 String	Identifier of the meeting this record belongs to. On a meeting it names the superordinate meeting; on a voting, election, speech, attendance list or protocol it names the meeting in which the record arose. Agenda items do not carry it: they are embedded in their meeting.
protocol_items	* ProtocolItem	Agenda items as actually recorded in the protocol.
votings	* Voting	Collection of voting records.
elections	* Election	Collection of election records.
speeches	* Speech	Collection of speech records.
text_segments	* TextSegment	Collection of text segments (e.g. verbatim protocol).
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

5.2.1.2 Usages

Used by	In slot	Role	Element
Container	protocols	range	Protocol
Meeting	has_protocol	range	Protocol
Voting	parent_protocol	range	Protocol
Election	parent_protocol	range	Protocol

5.2.1.3 Examples

5.2.1.3.1 Example Protocol: Protocol as an entity in its own right referenced by the meeting

```
protocols:
- global_uri: ops:protokoll_sr_winter25_sitzung_6
  parent_meeting: parl:sr_winter25_sitzung_6
  protocol_items:
  - global_uri: ops:protokollpunkt_69905
    agenda_item_type: item
    agenda_item_number: '6'
    agenda_item_position: 4
    agenda_item_title:
    - text: >-

    landing_page: >-
      https://www.parlament.ch/de/ratsbetrieb/amtliches-bulletin/amtliches-bulletin-die-
verhandlungen?SubjectId=69905#votum3
    agenda_item_category: agenda_item
    datetime_created: '2026-01-12T00:00:00+01:00'
    datetime_modified: '2026-01-12T00:00:00+01:00'
  datetime_created: '2026-01-12T00:00:00+01:00'
  datetime_modified: '2026-01-12T00:00:00+01:00'
```

5.2.2 ProtocolItem (agenda item as recorded)

5.2.3 Class: ProtocolItem

An agenda item as actually recorded in the protocol. It carries the same elements as AgendaItem through the IsAgendaItem mixin, but is a class in its own right: the record is not a special case of the plan. It arises independently and may contain items that were never put on the agenda, just as the agenda may contain items that were never dealt with.

5.2.3.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration. Inheritance:

Name	Cardinality and Range	Description
		IsEventWithDuration
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration. Inheritance: IsEventWithDuration
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration. Inheritance: IsEventWithDuration
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates
agenda_item_type	0..1 AgendaItemTypeEnum	Type of agenda item, distinguishing individual items from groups. Inheritance: IsAgendaItem
agenda_item_number	0..1 String	Number of the agenda item on the agenda, e.g. “2.1” or “3” (string type to also support roman numerals). Inheritance: IsAgendaItem
agenda_item_position	0..1 Integer	Integer position of the agenda item in the meeting sequence, used for sorting and display. Inheritance: IsAgendaItem
leading_actor_id	0..1 String	The leading department for the agenda item. Inheritance: IsAgendaItem
speaking_actor_id	0..1 String	The speaker or head of the department for the agenda item. Inheritance: IsAgendaItem
agenda_item_title	* MultilingualString	Title of the agenda item. Inheritance: IsAgendaItem
affair_id	0..1 String	Identifier of the affair (eCH-0295) the record refers to. Administrative agenda items (e.g. approval of the minutes) have no affair. An affair usually runs through several agenda items

Name	Cardinality and Range	Description
		— in legislation, for instance, the debate on entering into the matter, the detailed deliberation, the final vote and, where applicable, the procedure for resolving differences between the chambers. Inheritance: IsAgendaItem
agenda_item_description	* MultilingualString	Subtitle or detailed description of the agenda item. Inheritance: IsAgendaItem
state_id	0..1 String	State identifier of the agenda item (reference to a state enumeration or a custom state), e.g. pending (not yet dealt with), in_progress, completed, postponed (to a later meeting) or withdrawn. Inheritance: IsAgendaItem
state_name	0..1 String	Diverging, free-text status designation, where the status enumeration does not suffice. Inheritance: IsAgendaItem
landing_page	0..1 String	URL providing further information. Inheritance: IsAgendaItem
url	* MultilingualString	Landing page or further web address, multilingual. Inheritance: IsAgendaItem
agenda_item_category	0..1 String	Free categorisation of the agenda item by content or grouping, e.g. “Gesetzgebung”, “Budget und Finanzen”, “Interpellationen und Anfragen”, “Wahlen”, by department, or introductory and technical items. The categorisation is not standardised and may vary between federal units. Inheritance: IsAgendaItem
parent_agenda_item	0..1 String	Identifier of the agenda item this record belongs to. On an agenda item it builds a hierarchy of agenda items — e.g. an item group “Gesetzesberatungen” with the sub-items “Energiegesetz (Detailberatung)” and “Energiegesetz (Schlussabstimmung)”; on a speech it names the agenda item under which the speech was given. Inheritance: IsAgendaItem
has_resolution	0..1 Resolution	The formal decision taken on this agenda item, e.g. the adoption of the energy law. The underlying voting with its vote ratio is recorded separately as a Voting. Inheritance: IsAgendaItem
joint_debates	* JointDebate	Joint debates attached to this record: on an agenda item, the debates in which it is deliberated together with other agenda items; on a meeting or a session, the joint debates held within it. Inheritance: IsAgendaItem
text_segments	* TextSegment	Collection of text segments (e.g. verbatim

Name	Cardinality and Range	Description
		protocol). Inheritance: IsAgendaItem
documents	* Work	Documents on the agenda item as FRBR Works, e.g. dispatches and reports, motions and amendments. Inheritance: IsAgendaItem

5.2.3.2 Usages

Used by	In slot	Role	Element
Protocol	protocol_items	range	ProtocolItem
Voting	parent_protocol_item	range	ProtocolItem
Election	parent_protocol_item	range	ProtocolItem

5.3 Joint debate (JointDebate)

5.3.1 Class: JointDebate

A joint debate: several agenda items are deliberated together, for instance substantively related affairs dealt with in a single debate. The joint debate hangs on an agenda item (AgendaItem), a protocol item (ProtocolItem), a meeting (Meeting) or a session (Session) and references the items debated jointly by their identifiers. Attached to a meeting or a session, it can also bring together agenda items that are distributed over several agenda positions or meetings.

5.3.1.1 Attribute

Name	Cardinality and Range	Description
joint_agenda_item_ids	* String	Identifiers of the agenda items (AgendaItem or ProtocolItem) debated jointly.

5.3.1.2 Usages

Used by	In slot	Role	Element
Session	joint_debates	range	JointDebate
Meeting	joint_debates	range	JointDebate
IsAgendaItem	joint_debates	range	JointDebate
AgendaItem	joint_debates	range	JointDebate
ProtocolItem	joint_debates	range	JointDebate

5.4 Resolution

5.4.1 Class: Resolution

The formal decision taken on an agenda item, including the voting procedures applied. It records what was decided, whereas Voting records how it was decided (procedure and vote ratio). Not every decision rests on a formal vote: noting a report, tacit acceptance or administrative decisions come about without one.

5.4.1.1 Attribute

Name	Cardinality and Range	Description
resolution_type	0..1 ResolutionTypeEnum	Type of resolution taken on the agenda item.
type_label	0..1 String	Custom type label when standard type values don't apply.
vote_procedures	* String	Procedures by which the vote was taken. Open procedures: show of hands, standing, electronic voting, roll call, and in crisis situations remote voting (votes communicated to the presidency beforehand and recorded together with the vote in the chamber), circulation procedure or voting in virtual sittings. Secret procedures: secret ballot with ballot papers, electronic secret voting. The procedure determines whether individual votes can be recorded.
documents	* Work	List of documents (FRBR Works) linked to the entity.

5.4.1.2 Usages

Used by	In slot	Role	Element
Container	resolutions	range	Resolution
IsAgendaItem	has_resolution	range	Resolution
AgendaItem	has_resolution	range	Resolution
ProtocolItem	has_resolution	range	Resolution

5.4.2 Enum: ResolutionTypeEnum

Type of resolution taken on an agenda item.

URI: ops:ResolutionTypeEnum

5.4.2.1 Permissible Values

Value	Description
accepted	Accepted (Annahme): e.g. a bill adopted, a motion approved, a decision taken.
	ops:enum/resolution_type/accepted
rejected	Rejected (Ablehnung): e.g. a bill rejected, a motion dismissed.
	ops:enum/resolution_type/rejected
noted	Noted (Kenntnisnahme): e.g. reports without a vote, communications, informative agenda items.
	ops:enum/resolution_type/noted
accepted_point_by_point	Accepted point by point (Punktweise Annahme)
	ops:enum/resolution_type/accepted_point_by_point

Value	Description
accepted_with_postulate	Accepted with postulate (Annahme mit Postulat)
	ops:enum/resolution_type/accepted_with_postulate
orally_settled	Orally settled (Mündlich erledigt)
	ops:enum/resolution_type/orally_settled
nearly_unanimous	Nearly unanimous (Beinahe einstimmig)
	ops:enum/resolution_type/nearly_unanimous
other	Other resolution type not covered by standard categories
	ops:enum/resolution_type/other

5.5 Motion

5.5.1 Class: Motion

A formal proposal submitted during the proceedings, such as an amendment to a legal text, a procedural motion (e.g. closure of the debate) or a motion to refer back. It is an entity in its own right because an agenda item may contain several motions, each with its own course (submitted, supported, voted on) and possibly a vote of its own.

5.5.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
title	0..1 String	Short title of the motion.
description	0..1 String	Full text of the motion.
documents	* Work	List of documents (FRBR Works) linked to the entity.

6 Votings and elections

Parliamentary decisions are taken either by votings on substantive questions or by elections of persons. The standard clearly distinguishes these two mechanisms and additionally records, in open procedures, the individual voting behaviour of every member of parliament.

6.1 Voting

6.1.1 Class: Voting

A voting on a substantive question: the subject (question), the procedure, the result with its vote ratio and — for open votings — the individual votes of the members. A voting is held in the course of the sitting and is therefore anchored in the protocol (parent_protocol, parent_protocol_item); it is also linked to the meeting (parent_meeting) and to the affair (affair_id). The presiding member does not take part in votings but casts the deciding vote in case of a tie (tie_breaker). The categorical decision (accepted, rejected, noted …) is not held on the voting but in the Resolution of the agenda item.

6.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
datetime_begin	0..1 Datetime	The date and time when the meeting or voting begins.
datetime_end	0..1 Datetime	The date and time when the meeting or voting ends.
voting_type	0..1 VotingTypeEnum	Type of voting procedure (preliminary, final, secret, etc.).
type_label	0..1 String	Custom type label when standard type values don’t apply.
voting_title	* MultilingualString	Title or question being voted on. If no specific subject exists, do not use the business item title.
optional	0..1 Boolean	Indicates if the meeting or voting is optional.
landing_page	0..1 String	URL providing further information.
label_yes	0..1 String	Meaning of a ‘yes’ vote.
label_no	0..1 String	Meaning of a ‘no’ vote.
label_abstention	0..1 String	Meaning of an ‘abstention’ vote.
tie_breaker	0..1 Boolean	Indicates whether the result was decided by the casting vote of the presiding member in case of a tie.

Name	Cardinality and Range	Description
total_count_yes	0..1 Integer	Total number of ‘yes’ votes.
total_count_no	0..1 Integer	Total number of ‘no’ votes.
total_count_abstention	0..1 Integer	Total number of abstentions.
total_other	* TotalOther	Vote counts for the options of a multiple-choice voting, one entry per option; used instead of total_count_yes, total_count_no and total_count_abstention (see TotalOther).
total_absent	0..1 Integer	Number of absent members who could not take part. Whether an absence was excused is tracked on the attendance list (Attendance).
total	0..1 Integer	Total number of votes, excluding absent and president’s vote.
majority_type	0..1 MajorityTypeEnum	Type of majority required for the vote (absolute, two-thirds, etc.).
majority_count	0..1 Integer	Number of votes required for the relevant majority threshold.
result_text	0..1 String	Free text describing the outcome, e.g. “Accepted with 120 to 75 votes with 5 abstentions”. For votings, the categorical decision (accepted, rejected, noted …) is not recorded here but in the Resolution (resolution_type) of the agenda item.
parent_meeting	0..1 String	Identifier of the meeting this record belongs to. On a meeting it names the superordinate meeting; on a voting, election, speech, attendance list or protocol it names the meeting in which the record arose. Agenda items do not carry it: they are embedded in their meeting.
parent_protocol	0..1 Protocol	The protocol in which the voting or election is recorded. A vote is held during the sitting and is therefore anchored in the minutes, not in the agenda planned beforehand: what was put on the agenda does not yet say what was actually voted on. Conversely, the protocol lists its votings and elections (votings, elections).
parent_protocol_item	0..1 ProtocolItem	The recorded agenda item (ProtocolItem) under which the voting or election took place. Omitted when the vote was taken without an agenda item; the link to the sitting is then given by parent_protocol and parent_meeting alone.
affair_id	0..1 String	Identifier of the affair (eCH-0295) the record refers to. Administrative agenda items (e.g. approval of the minutes) have no affair. An affair usually runs through several agenda items — in legislation, for instance, the debate on

Name	Cardinality and Range	Description
		entering into the matter, the detailed deliberation, the final vote and, where applicable, the procedure for resolving differences between the chambers.
group_reference	0..1 GroupReference	Reference to the acting body/organ (lightweight snapshot at time of linking).
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

```

6.1.2 Enum: VotingTypeEnum

Type of voting procedure.

URI: ops:VotingTypeEnum

6.1.2.1 Permissible Values

Value	Description
preliminary_vote	Preliminary vote (Zwischenabstimmung) during the deliberation, e.g. on entering into an affair, on a motion, opposing two motions that exclude each other or refer to the same passage, a contingent vote (Eventualabstimmung) when more than two motions exist on one subject, on a single article of a law, or the overall vote after the first reading of an act deliberated in two readings.
	ops:enum/voting_type/preliminary_vote
final_vote	Final vote (Schlussabstimmung) on the proposal as a whole, e.g. after the last reading of an act, the overall vote on a decree, the adoption or rejection of a proposal in its entirety, or the point-by-point vote on a parliamentary proposal.
	ops:enum/voting_type/final_vote
tie_breaker_president	Casting vote of the presiding member in case of a tie (Stichentscheid Präsidium). The presiding member does not take part in votings but decides in case of a tie. In a secret vote ending in a tie, the proposal of

Value	Description
	the preparatory body is deemed accepted instead.
	ops:enum/voting_type/tie_breaker_president
secret_vote	Secret ballot (Geheime Abstimmung), e.g. on particularly sensitive matters such as a request for pardon or the lifting of immunity, after a secret deliberation, or on request. Only the overall result is published.
	ops:enum/voting_type/secret_vote
other	Other voting type, specified in type_label — e.g. a multiple-choice voting on several proposals pointing in the same direction (see TotalOther).
	ops:enum/voting_type/other

6.1.3 Enum: MajorityTypeEnum

Type of majority required for the vote.

URI: ops:MajorityTypeEnum

6.1.3.1 Permissible Values

Value	Description
absolute	Absolute majority: more than half of the reference base (members or votes cast, depending on the applicable rules), e.g. at least 101 of 200. Standard case for elections of persons such as the election of the Federal Council or of committee chairs, and required for constitutional amendments in some cantons. If nobody reaches it in the first ballot of an election, a second ballot usually follows in which the relative majority suffices.
	ops:enum/majority_type/absolute
two_thirds	Two-thirds majority, e.g. at least 134 of 200; required in some cantons for constitutional amendments.
	ops:enum/majority_type/two_thirds
other	Other majority threshold not covered by the standard categories, e.g. the relative majority among several options in a multiple-choice voting.
	ops:enum/majority_type/other

6.1.4 Class: TotalOther

Vote count for one option of a multiple-choice voting. If several proposals pointing in the same direction are put to the vote at the same time, the members vote on more than two variants and the variant with most votes prevails (in Zurich colloquially a „Cup-Abstimmung“, cast via several voting buttons). Such a voting is represented with voting_type other and a descriptive type_label; total_count_yes, total_count_no and total_count_abstention remain empty, and each option receives an entry with count and label. Example: Gemeinderat of the City of Zurich, sitting of 28 February 2024, affair 2023/361, four options with 75, 25, 12 and 0 votes.

6.1.4.1 Attribute

Name	Cardinality and Range	Description
count	0..1 Integer	The count of votes for the total other category.
label	0..1 String	Assign a label to a structured piece of information (e.g., display name, position, etc.).

6.1.4.2 Usages

Used by	In slot	Role	Element
Voting	total_other	range	TotalOther

6.2 Individual Vote

6.2.1 Class: IndividualVote

The vote cast by an individual member in a voting. Individual votes are only recorded for open votings; for secret votings only the overall result is published. An individual vote concerns one specific voting and differs from attendance (Attendance), which records presence at the meeting as a whole: a member present at the meeting may be recorded as not_voted in a single voting, for instance because they briefly left the room.

6.2.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
parent_voting	0..1 Voting	The ID of the voting associated with the individual vote.
person_reference	0..1 PersonReference	The member who cast the vote, as a reference to a person according to eCH-0294.
seat_nr	0..1 String	The seat number of the individual vote, if applicable.
weight	0..1 Integer	Voting weight of the member; normally 1. Other values arise, for instance, where a member also votes for an absent member (proxy, weight 2), in communal assemblies where legal entities hold several votes, or in historical systems in which different groups of persons had different voting weights.
individual_vote_type	0..1 IndividualVoteTypeEnum	Type of vote cast (yes, no, abstention, no vote, etc.).

Name	Cardinality and Range	Description
type_label	0..1 String	Custom type label when standard type values don't apply.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

  global_uri: actors:person_zh_stadt_2
  label: Mitglied Auswahl B
seat_nr: '47'
individual_vote_type: other
type_label: Auswahl B
datetime_created: '2024-02-28T00:00:00Z'
```

6.2.2 Enum: IndividualVoteTypeEnum

Type of individual vote cast by a member.

URI: ops:IndividualVoteTypeEnum

6.2.2.1 Permissible Values

Value	Description
yes	Yes vote: the member approves the proposal or motion.
	ops:enum/individual_vote_type/yes
no	No vote: the member rejects the proposal or motion.
	ops:enum/individual_vote_type/no
abstention	Abstention: the member takes part in the voting but abstains; with electronic voting, by pressing the “abstention” button.
	ops:enum/individual_vote_type/abstention
not_voted	Not voted: the member did not cast a vote, for instance because they were present but did not vote or were absent.
	ops:enum/individual_vote_type/not_voted
tie_breaker	Tie-breaking vote, cast by the presiding member in case of a tie (see voting_type tie_breaker_president).
	ops:enum/individual_vote_type/tie_breaker
other	Vote that cannot be placed on the yes/no axis — for instance in a multiple-choice voting, where the member voted but neither yes nor no; the chosen option is held in type_label (e.g. “Auswahl A”). Counterpart of total_other on the voting, which keeps the individual vote evaluable without a separate enumeration value for every cantonal selection mechanism.
	ops:enum/individual_vote_type/other

6.3 Election

6.3.1 Class: Election

An election in which a parliamentary body appoints one or several persons to an office or function. Unlike a voting (Voting), which decides substantive questions, an election is a decision on persons: it is often held by secret ballot and usually requires an absolute majority, whereas votings are mostly open. The presiding member, who does not take part in votings, does vote in elections. Each ballot is recorded as a separate election; the ballots of one election are linked through the common agenda item — for instance a first ballot requiring an absolute majority that remains without result, followed by a second ballot in which the relative majority suffices.

6.3.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
datetime_begin	0..1 Datetime	The date and time when the meeting or voting begins.
datetime_end	0..1 Datetime	The date and time when the meeting or voting ends.
election_type	0..1 ElectionTypeEnum	Type of election procedure.
type_label	0..1 String	Custom type label when standard type values don't apply.
title	0..1 String	Title of the election, e.g. "Wahl Kommissionspräsidium WAK".
landing_page	0..1 String	URL providing further information.
total_absent	0..1 Integer	Number of absent members who could not take part. Whether an absence was excused is tracked on the attendance list (Attendance).
total	0..1 Integer	Total number of votes, excluding absent and president's vote.
majority_type	0..1 MajorityTypeEnum	Type of majority required for the vote (absolute, two-thirds, etc.).
majority_count	0..1 Integer	Number of votes required for the relevant majority threshold.
result_text	0..1 String	Free text describing the outcome, e.g. "Accepted with 120 to 75 votes with 5 abstentions". For votings, the categorical decision (accepted, rejected, noted …) is not recorded here but in the Resolution (resolution_type) of the agenda item.
parent_meeting	0..1 String	Identifier of the meeting this record belongs to. On a meeting it names the superordinate meeting; on a voting, election, speech, attendance list or protocol it names the meeting in which the record arose. Agenda items do not carry it: they are embedded in their meeting.
parent_protocol	0..1 Protocol	The protocol in which the voting or election is recorded. A vote is held during the sitting and is therefore anchored in the minutes, not in the agenda planned beforehand: what was put on the

Name	Cardinality and Range	Description
		agenda does not yet say what was actually voted on. Conversely, the protocol lists its votings and elections (votings, elections).
parent_protocol_item	0..1 ProtocolItem	The recorded agenda item (ProtocolItem) under which the voting or election took place. Omitted when the vote was taken without an agenda item; the link to the sitting is then given by parent_protocol and parent_meeting alone.
affair_id	0..1 String	Identifier of the affair (eCH-0295) the record refers to. Administrative agenda items (e.g. approval of the minutes) have no affair. An affair usually runs through several agenda items — in legislation, for instance, the debate on entering into the matter, the detailed deliberation, the final vote and, where applicable, the procedure for resolving differences between the chambers.
group_reference	0..1 GroupReference	Reference to the acting body/organ (lightweight snapshot at time of linking).
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

6.3.1.2 Usages

Used by	In slot	Role	Element
Container	elections	range	Election
Protocol	elections	range	Election

6.3.2 Enum: ElectionTypeEnum

Type of election procedure.

URI: ops:ElectionTypeEnum

6.3.2.1 Permissible Values

Value	Description
secret	Secret election (Geheime Wahl): votes are cast anonymously, by ballot paper or an electronic secret system, so it cannot be traced who

Value	Description
	elected whom. Standard for elections of persons and often required by law — at federal level e.g. the Federal Council (elected by the United Federal Assembly with an absolute majority in the first ballots), federal judges and committee chairs; at cantonal level e.g. the president of parliament, the president of the government, the presidents of the highest courts, judges, the state chancellor and committee chairs. Only the overall result is published, no individual votes.
	ops:enum/election_type/secret
open	Open election (Offene Wahl): votes are cast openly and it is traceable who elected whom, so individual votes can be recorded. Used where transparency is desired, for uncontested elections or in smaller bodies.
	ops:enum/election_type/open
silent	Silent election (Stille Wahl) without formal vote, by acclamation or consensus; possible only when no objection is raised, e.g. the re-election of a committee chair without a rival candidate.
	ops:enum/election_type/silent

7 Attendance

Attendance lists record who took part in a sitting. They document participation and are the basis on which a body's capacity to take decisions can be assessed.

7.1 Attendance

7.1.1 Class: Attendance

Aggregated attendance record for a meeting (number of members present, absent, excused): it records which members of a parliamentary body were present, absent or excused at a sitting. Attendance is captured on two levels — this aggregate with the totals for the meeting, and one IndividualAttendance per person, linked to it via parent_attendance. Attendance records serve the documentation of participation, the verification of the quorum, transparency towards the public, accountability for the fulfilment of duties, statistics on attendance rates and the administration of allowances and expenses.

7.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
parent_meeting	0..1 String	The meeting to which the attendance list belongs.
datetime_begin	0..1 Datetime	Date and time at which attendance was recorded.
group_reference	0..1 GroupReference	Reference to the acting body/organ (lightweight snapshot at time of linking).
total_count	0..1 Integer	Total number of members of the body, the reference value for quorum calculations (e.g. 200 for the National Council, 46 for the Council of States). The quorum itself is not stored as a field of its own: it follows from the ratio of total_present to total_count and the quorum rules of the body, and is calculated on the data side when needed.
total_present	0..1 Integer	Number of members present, e.g. 185 of 200.
total_absent	0..1 Integer	Number of members absent without excuse, e.g. 3 of 200.
total_excused	0..1 Integer	Number of members whose absence was excused, e.g. 12 of 200.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates

Name	Cardinality and Range	Description
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

7.1.1.2 Usages

Used by	In slot	Role	Element
Container	attendances	range	Attendance
IndividualAttendance	parent_attendance	range	Attendance

7.2 IndividualAttendance (individual level)

7.2.1 Class: IndividualAttendance

Individual attendance record for a specific person at a meeting (linked via the parent Attendance aggregate). It concerns the meeting as a whole and differs from the individual vote (IndividualVote), which records the vote cast in a specific voting: a person present at the meeting (attendance_type present) can be recorded with not_voted in a single voting because they briefly left the chamber at that moment.

7.2.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
parent_attendance	0..1 Attendance	The Attendance aggregate this record belongs to; since the aggregate in turn is attached to the meeting, the individual record is thereby assigned to the meeting.
person_reference	0..1 PersonReference	The person whose attendance is recorded, as a reference to a person according to eCH-0294.
attendance_type	0..1 AttendanceTypeEnum	Type of individual attendance.
reason	* MultilingualString	Reason for absence, lateness or substitution (free-text, multilingual).
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created.

Name	Cardinality and Range	Description
		Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

7.2.1.2 Usages

Used by	In slot	Role	Element
Container	individual_attendances	range	IndividualAttendance

7.2.2 Enum: AttendanceTypeEnum

Type of individual attendance.

URI: ops:AttendanceTypeEnum

7.2.2.1 Permissible Values

Value	Description
remote	Remote participation, e.g. via video conference
	ops:enum/attendance_type/remote
substitute	Substitute (Stellvertretung): another person took part in place of the member
	ops:enum/attendance_type/substitute
present	Present in person
	ops:enum/attendance_type/present

The modelling of substitution (e.g. who substituted for whom, with which voting right) is being elaborated further in issue #24.

A second status axis `present` / `excused` / `absent` (“whether present”) in parallel to the existing axis “how present” is under discussion as an extension.

8 Speeches

Speeches record the parliamentary debate — who spoke when and on which agenda item, with the verbatim text and, where available, an audio or video recording.

8.1 Speech

8.1.1 Class: Speech

A speech or statement made during a meeting (also called Votum or speaker segment): the oral contribution of a person in a parliamentary sitting and thus the central instrument of political debate and of expressing opinions in parliament. Speeches take various forms — main statements (detailed positions on an affair, justification of motions, presentation of the parliamentary group's opinion), short interventions (interjected questions, corrections), declarations by a parliamentary group delivered by its spokesperson, and statements by members of the government (answering questions, defending bills). A speech records who spoke when and under which agenda item, with the wording as text and, where available, as an audio or video recording. It can be delivered in two ways: embedded in the protocol (Protocol.speeches), where the meeting follows from the surrounding protocol but the agenda item does not, or flat in Container.speeches, where without references any link would be missing. parent_meeting and parent_agenda_item are therefore set in both cases; they carry the same values as on Voting and Election and make the speech evaluable regardless of the delivery form it came in.

8.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
parent_meeting	0..1 String	Identifier of the meeting this record belongs to. On a meeting it names the superordinate meeting; on a voting, election, speech, attendance list or protocol it names the meeting in which the record arose. Agenda items do not carry it: they are embedded in their meeting.
parent_agenda_item	0..1 String	Identifier of the agenda item this record belongs to. On an agenda item it builds a hierarchy of agenda items — e.g. an item group "Gesetzesberatungen" with the sub-items "Energiegesetz (Detailberatung)" and "Energiegesetz (Schlussabstimmung)"; on a speech it names the agenda item under which the speech was given.
language	0..1 String	Language in which the speech was given, e.g. de

Name	Cardinality and Range	Description
		(German), fr (French), it (Italian), rm (Romansh) or en (English).
start	0..1 String	Start indicator or position.
datetime_begin	0..1 Datetime	Date and time at which the speech began. Together with datetime_end it allows the speech to be located precisely in audio and video recordings, speaking time to be analysed per person or parliamentary group, and compliance with time limits to be checked.
datetime_end	0..1 Datetime	Date and time at which the speech ended; the speaking time results from the difference to datetime_begin.
actor_fullname	0..1 String	Name of the speaking person, for quick access without resolving person_reference.
person_reference	0..1 PersonReference	The speaking person, as a reference to a person according to eCH-0294.
role	0..1 String	Role in which the person speaks, e.g. president of a parliamentary group, rapporteur or member of the Federal Council.
text	1 String	Wording of the speech.
text_format	0..1 String	Format of text (text, html, html_with_timestamps).
text_type	0..1 String	Version of the wording: the raw transcript (verbatim, unedited and including filler words, available directly after the sitting) or the edited transcript (editorially revised and grammatically corrected, the official protocol version).
landing_page	0..1 String	URL providing further information.
media_url	0..1 String	URL of the audio or video recording of the speech, or of the live stream during the sitting, which is archived afterwards.
media_type	0..1 String	Type of the recording: audio (original sound of the speech) or video (visual recording, usually of plenary sittings).
media_format	0..1 String	MIME type of the recording, e.g. audio/mpeg (MP3), audio/wav, video/mp4 or video/webm.
documents	* Work	List of documents (FRBR Works) linked to the entity.
date_created	0..1 Date	The date when an entity was created. Inheritance: HasCreationModificationDates
datetime_created	0..1 Datetime	The date and time when an entity was created. Inheritance: HasCreationModificationDates
date_modified	0..1 Date	The date when an entity was last modified. Inheritance: HasCreationModificationDates

Name	Cardinality and Range	Description
datetime_modified	0..1 Datetime	The date and time when an entity was last modified. Inheritance: HasCreationModificationDates

9 Texts and media

Parliamentary debates are recorded not only as structured data but also as texts and multimedia recordings. These entities enable the management of transcripts, audio and video recordings and further media formats, as well as the technical infrastructure for data exchange and multilingualism.

9.1 TextSegment

9.1.1 Purpose

Records text passages with versioning and language variants. Used primarily for transcriptions of speeches, but can also be applied to other text documents.

9.1.2 Structure

- **text**: the actual text content
- **language**: language code (ISO 639-1)
- **format**: format of the text (plain, markdown, html)
- **version_type**: kind of version
    - **raw**: unedited raw transcript
    - **edited**: editorially revised version
    - **translated**: translation into another language
    - **summary**: summary

9.1.3 Design decision

Why a separate entity? - Allows several versions of the same text (raw, edited, translated) - Version control and traceability of changes - Flexibility regarding formats (plain, markdown, HTML for different output channels)

9.1.4 Application

Mainly linked with Speech entities:

```
Speech
  ├─ TextSegment (raw transcript, de)
  ├─ TextSegment (edited protocol, de)
  ├─ TextSegment (translation, fr)
  └─ TextSegment (summary, de)
```

9.1.5 Carriers of a text segment

Text segments are not tied to the verbatim record alone: `Protocol` carries them for the wording of the whole sitting, and `AgendaItem` — respectively the recorded `ProtocolItem` — for text belonging to one agenda item, such as a subtitle, a cross-reference or a reasoning already published with the agenda. Because both classes carry the `IsAgendaItem` mixin, `text_segments` is available on the planned as well as on the recorded side. A single contribution, by contrast, carries its wording directly in `text`, `text_format` and `text_type`.

9.2 Media

9.2.1 Purpose

References media files (audio, video, documents) belonging to parliamentary activities.

9.2.2 Structure

- **media_type**: kind of media file
  - **audio**: audio recording
  - **video**: video recording
  - **document**: documents (PDF, etc.)
  - **image**: images
- **url**: URL of the media file
- **mime_type**: MIME type (audio/mp3, video/mp4, application/pdf, etc.)
- **title**: title of the media file
- **description**: description
- **language**: language (for language-based media)
- **duration**: duration (for audio/video, in seconds)
- **file_size**: file size in bytes
- **quality**: quality indication (e.g. “720p”, “high”, “low”)

9.2.3 Design decision

Why a generic Media entity? - Uniform structure for all media types - Extensible for new formats - Technical metadata recorded centrally - Several quality levels of the same recording possible

9.2.4 Application

Can be attached to various entities:

```
Speech
  ├─ Media (audio recording, MP3, 256 kbps)
  ├─ Media (audio recording, MP3, 128 kbps)
  ├─ Media (video recording, MP4, 1080p)
  └─ Media (video recording, MP4, 480p)

AgendaItem
  └─ Media (PDF of the bill)

Meeting
  └─ Media (livestream URL)
```

9.2.5 Class: TextSegment

A text segment such as cross-references or subtitles. Text segments are carried by the protocol, by a speech or by an agenda item (planned AgendaItem or recorded ProtocolItem).

9.2.5.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
text	1 String	Text content of the element.

9.2.5.2 Usages

Used by	In slot	Role	Element
IsAgendaItem	text_segments	range	TextSegment
AgendaItem	text_segments	range	TextSegment
Protocol	text_segments	range	TextSegment
ProtocolItem	text_segments	range	TextSegment

9.2.6 Class: Media

Media files or documents (including protocols in PDF/HTML/WORD or links to audio/video).

9.2.6.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system. Inheritance: HasIdentification
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity. Inheritance: HasIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasIdentification
title	0..1 String	Title of the element.
media_type	0..1 String	Type of media (audio, video, document).
url	* MultilingualString	Landing page or further web address, multilingual.
version	0..1 String	Version number or identifier.
parent_type	0..1 String	Type of parent object (meeting, agenda, speech, affair).

10 Shared elements

10.1 Reference classes

`PersonReference` and `GroupReference` name a person or a group without describing them here: what a person or a body is, is defined by eCH-0294; council operations merely point to it. Besides the pointer, the reference retains the key characteristics **at the time of linking** — for a speech, for instance, the parliamentary group the speaker belonged to back then.

This serves three purposes:

- **Useful local data** without costly queries of the complete entity
- **No redundancy**, since not all information has to be repeated at every mention
- **Implicit versioning**, as the reference stays unchanged even if the linked person or group changes later

Unlike an entity, a reference is not identified in its own right — it merely names an identified entity. That is why `global_uri` is not mandatory here: all that is required is that at least one of `local_id` or `global_uri` is set. A system that only knows the local id of the referenced entity states that; it is resolved within the same delivery. Beyond the delivery, the `global_uri` does the pointing.

10.1.1 Class: PersonReference

Lightweight reference to a person with key identification data at time of linking. Preserves historical accuracy even if the person changes later. The referenced person is identified by `local_id` or `global_uri`; at least one of the two is required.

10.1.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier of the referenced entity. It is resolved within the same delivery. Inheritance: HasReferenceIdentification
global_uri	0..1 Uriorcurie	The unique, globally valid URI of the referenced entity. Unlike a local_id it also resolves beyond the delivery. Inheritance: HasReferenceIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasReferenceIdentification
label	1 String	Mandatory short display name to identify the person within the organisation (e.g. with added birth year to distinguish persons with the same name).
label_long	0..1 String	Optional long display name including academic titles and full official name (e.g. “Dr. Maria Muster-Beispiel”).
group_label	0..1 String	Name of the body/group at time of linking.

10.1.1.1.1.1 Constraints

At least one of the following must be set:

- local_id
- global_uri

10.1.1.2 Usages

Used by	In slot	Role	Element
IndividualVote	person_reference	range	PersonReference
IndividualAttendance	person_reference	range	PersonReference
Speech	person_reference	range	PersonReference

10.1.2 Class: GroupReference

Lightweight reference to a group with key identification data at time of linking. The referenced group is identified by `local_id` or `global_uri`; at least one of the two is required. A `local_id` is resolved within the same delivery, a `global_uri` also beyond it.

10.1.2.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier of the referenced entity. It is resolved within the same delivery. Inheritance: HasReferenceIdentification
global_uri	0..1 Uriorcurie	The unique, globally valid URI of the referenced entity. Unlike a local_id it also resolves beyond the delivery. Inheritance: HasReferenceIdentification
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans. Inheritance: HasReferenceIdentification
label	0..1 String	Assign a label to a structured piece of information (e.g., display name, position, etc.).
abbreviation	* MultilingualValue	Abbreviation (can be multilingual).

10.1.2.1.1.1 Constraints

At least one of the following must be set:

- local_id
- global_uri

10.1.2.2 Usages

Used by	In slot	Role	Element
Legislature	group_reference	range	GroupReference
Meeting	group_id	range	GroupReference
Meeting	group_reference	range	GroupReference

Used by	In slot	Role	Element
Voting	group_reference	range	GroupReference
Election	group_reference	range	GroupReference
Attendance	group_reference	range	GroupReference

10.2 Multilingual texts

In Switzerland, designations, titles and descriptions often exist in several languages. Rather than keeping a separate field per language, a slot of type `MultilingualString` takes a list of entries with `text` and `language`. Those who keep only one language deliver a single entry — the language is to be stated there as well. Links are modelled the same way: many parliamentary information systems keep a separate address per language, which is why `url` is multilingual too.

10.2.1 Class: MultilingualString

A string that can contain text in multiple languages.

10.2.1.1 Attribute

Name	Cardinality and Range	Description
text	1 String	Text content of the element.
language	1 String	Language code in ISO 639-1 format (two lowercase letters, e.g. “de”, “fr”, “it”, “en”).

10.2.1.2 Usages

Used by	In slot	Role	Element
Legislature	name	range	MultilingualString
Session	name	range	MultilingualString
Session	url	range	MultilingualString
Meeting	name	range	MultilingualString
Meeting	url	range	MultilingualString
IsAgendaItem	agenda_item_title	range	MultilingualString
IsAgendaItem	agenda_item_description	range	MultilingualString
IsAgendaItem	url	range	MultilingualString
AgendaItem	agenda_item_title	range	MultilingualString
AgendaItem	agenda_item_description	range	MultilingualString
AgendaItem	url	range	MultilingualString
ProtocolItem	agenda_item_title	range	MultilingualString
ProtocolItem	agenda_item_description	range	MultilingualString
ProtocolItem	url	range	MultilingualString
Voting	voting_title	range	MultilingualString
IndividualAttendance	reason	range	MultilingualString

Used by	In slot	Role	Element
Media	url	range	MultilingualString

10.3 Mixin classes

Three classes carry no data of their own; they bundle slots that look the same across many classes — the identification of an entity, its creation and modification dates, and the temporal course of an event with planned and actual start and end. They come from the specialist group's common schema (eCH-0292) and are imported by its standards so that the same information is named alike and behaves alike everywhere.

A mixin is not a superclass: no instance of a mixin class is ever created, and nothing of it shows in the data. The attribute tables of the classes therefore list the inherited slots individually and note their origin under "Inheritance" — the three sections below explain what stands behind that note.

10.3.1 Class: HasIdentification

A mixin class that provides slots for the identification of an entity. It is used for entities that are identified in their own right; their `global_uri` is the identifier and therefore mandatory.

10.3.1.1 Attribute

Name	Cardinality and Range	Description
local_id	0..1 String	Local identifier. For example, a UUID from the council information system.
global_uri	1 Uriorcurie	A unique, globally valid URI for the entity.
wikidata_uri	0..1 Uriorcurie	A URI that refers to a Wikidata entity, e.g. http://www.wikidata.org/entity/Q813067 for Beat Jans.

10.3.1.2 Mixin Usage

Container, Legislature, Session, Meeting, AgendaItem, Protocol, ProtocolItem, Voting, IndividualVote, Election, Attendance, IndividualAttendance, Speech, TextSegment, Motion, Media, Work, Expression, Manifestation, WorkContainer

10.3.2 Class: HasCreationModificationDates

A mixin class that provides slots for modeling creation and modification dates of an entity.

10.3.2.1 Attribute

Name	Cardinality and Range	Description
date_created	0..1 Date	The date when an entity was created.
datetime_created	0..1 Datetime	The date and time when an entity was created.
date_modified	0..1 Date	The date when an entity was last modified.
datetime_modified	0..1 Datetime	The date and time when an entity was last modified.

10.3.2.2 Mixin Usage

Legislature, Session, Meeting, AgendaItem, Protocol, ProtocolItem, Voting, IndividualVote, Election, Attendance, IndividualAttendance, Speech, Expression, Manifestation

10.3.3 Class: IsEventWithDuration

A mixin class that provides slots for modeling events or occurrences with time duration.

10.3.3.1 Attribute

Name	Cardinality and Range	Description
date_begin_actual	0..1 Date	The actual start date of an event or occurrence with time duration.
datetime_begin_actual	0..1 Datetime	The actual start date and time of an event or occurrence with time duration.
date_begin_planned	0..1 Date	The planned start date of an event or occurrence with time duration.
datetime_begin_planned	0..1 Datetime	The planned start date and time of an event or occurrence with time duration.
date_end_actual	0..1 Date	The actual end date of an event or occurrence with time duration.
datetime_end_actual	0..1 Datetime	The actual end date and time of an event or occurrence with time duration.
date_end_planned	0..1 Date	The planned end date of an event or occurrence with time duration.
datetime_end_planned	0..1 Datetime	The planned end date and time of an event or occurrence with time duration.

10.3.3.2 Mixin Usage

Legislature, Session, Meeting, AgendaItem, ProtocolItem

11 Copyrights

Persons preparing eCH-standards shall remain the owners of their intellectual property rights. These persons, however, obligate themselves to provide their intellectual property rights or other rights in third party intellectual property rights, to the extent possible, to the relevant technical units and the registered association eCH for free and for unlimited use and further development as part of the purpose of the association.

The standards prepared by the technical units can be used, distributed and developed further for free and to an unlimited extent by stating the name of the respective author of eCH.

eCH-standards are fully documented and free of any restrictions of licence and/or patent law. The associated documentation can be requested for free.

These provisions shall apply to the standards prepared by eCH only, however, not to any standards or products of third parties which include reference to eCH-standards. The standards include the relevant references to third party rights.

12 Appendix A – References & bibliography

Where a version is stated, it is the one this standard was developed against.

12.1 Standards of the “Political Affairs” specialist group

The standards of the specialist group are developed jointly and reference one another. All of them currently carry the status “In Arbeit” (in progress; as of 10 August 2026); no version is therefore stated.

eCH-0292	eCH-0292: Meta-processes for political affairs – shared data elements, from which this standard takes the reference classes and the mixins: https://www.ech.ch/de/ech/ech-0292
eCH-0294	eCH-0294: Political actors – defines the persons and groups that `PersonReference` and `GroupReference` point to: https://www.ech.ch/de/ech/ech-0294
eCH-0295	eCH-0295: Parliamentary affairs – the affairs dealt with in agenda items, votings and speeches: https://www.ech.ch/de/ech/ech-0295
eCH-0296	eCH-0296: Legal acts and legislative texts: https://www.ech.ch/de/ech/ech-0296
eCH-0297	eCH-0297: Public consultations: https://www.ech.ch/de/ech/ech-0297

12.2 Code lists and further sources

ISO 639-1	ISO (International Organization for Standardization). Language codes, used in the `language` slot of `MultilingualString`.
Dublin Core	DCMI Metadata Terms. Source of several `slot_uri` assignments (prefix `dcterms`): https://www.dublincore.org/specifications/dublin-core/dcmi-terms/
LinkML	Modelling language in which this standard is defined: https://linkml.io
